

Sample Workflow: College Event Registration

Scenario: Transforming basic student information and event preferences into a clear and organized college event registration plan.

Goal: Take a student's basic details, selected event, eligibility information, available documents, and participation needs and turn them into a structured event registration workflow, including a self-review stage.

Step 1: Structuring & Planning (The Setup)

Goal: Identify the student's event requirements and organize the information needed for registration.

Prompt 1: Act as an expert college event registration assistant. I am going to give you basic information about a student, including course/year, location, selected event, participation type, existing registration status, and available documents or details.

Your task: Extract the key registration requirements and create a structured checklist covering eligibility, required information, registration stages, deadlines, and any missing information.

[Insert Student Details Here]

Expected AI Output: A structured checklist showing the student's requirements, available information, missing information, and the main stages of the event registration process.

Step 2: Event Registration Guidance (The Execution)

Goal: Create a clear step-by-step registration plan based strictly on the information organized in Step 1.

Prompt 2: Excellent. Now, using only the student information and checklist created in Step 1, prepare a clear step-by-step college event registration guide.

Constraints:

- Keep the instructions simple and in the correct sequence.
- Clearly separate information preparation, event selection, registration, confirmation, and participation stages.
- Do not invent registration fees, deadlines, eligibility rules, event schedules, or college policies.
- Identify missing student information instead of guessing.
- Mention where official college or event-organizer verification is required.
- Include a final checklist the student can use before submitting the registration.

Expected AI Output: A practical step-by-step event registration guide based on the student's information, with missing or uncertain requirements clearly identified.

Step 3: Critique and Refinement (The Required Gate)

Goal: Force the AI to evaluate the registration guidance for completeness, accuracy, and unsupported assumptions.

Prompt 3: Before we finalize this, act as a strict college event registration reviewer. Review the guidance you just created against the following checklist:

- 1 Does the guidance match the student's stated event and participation requirements?

- 2 Are all available and missing details clearly identified?
- 3 Are the registration stages presented in a logical order?
- 4 Were any fees, deadlines, eligibility rules, schedules, or college policies invented?
- 5 Are uncertain or event-specific requirements clearly marked for official verification?

First: List your critique and explain where the registration guide failed the checklist. **Second:** Output the final, corrected college event registration workflow that fixes those issues.

Expected AI Output: A clear self-critique followed immediately by a refined and finalized event registration workflow.

Workflow Principle

This workflow demonstrates progression, dependency between steps, and a mandatory evaluation gate. The college event registration guide should not be considered final until it has been reviewed and corrected in Step 3.
